AI Automation
thinkbiegger.com

I work at PDSI. I'm also building AI automation tools for construction companies — and I want to start right here. Here are three things I can build that would save PDSI real time and money.

01 — PILOT

Drywall Estimating Tool

FREE

Feed it plans and specs — it calculates materials, labor hours, and costs automatically. Faster estimates with fewer mistakes. I'll build this one on me so you can see the results firsthand.

02

Bid Finder

AI scans government contract sites and flags opportunities that match PDSI's NAICS codes and certifications — HUBZone, DBE, all of it. The right bids come to you instead of you hunting for them.

03

File Organizer

AI sorts, tags, and organizes permits, contracts, insurance certs, and jobsite photos by project. Find anything in seconds instead of digging through folders.

Let me build the estimating tool for free.

If it works, we keep going.
